

Healthcare and ARCH

COOLER DESIGN, INC.

4th Quarter 2011

TECH UPDATE

Cooler Design is pleased to announce that its office has integrated the use of **Autodesk Revit** on several projects.

Revit is the most widely accepted BIM (Building Information Modeling) software modeling tool being used in architecture today. Revit and BIM can help your project succeed in a number of ways including:

Autodesk
Revit
Architecture
2012

- Quick 3D conceptual models
- Accelerated Project Coordination
- Better collaboration with consultants
- More accurate drawings

A NOTE FROM BILL

In our 6 1/2 years of providing design service to the healthcare community, Cooler Design has been blessed with many wonderful clients. Our talented staff has been able to show their creativity in their projects and bring joy to our clients.

In the next few weeks I will be announcing an expansion to Cooler Design's suite of services. This will enable us to provide comprehensive planning and design services and a more **holistic solution** for your projects.

PROJECT SPOTLIGHT: SOUTHERN INDIANA PEDIATRICS

This new 25,000 sf Pediatrics office building in Bloomington is nearing completion. The design for this outpatient center is based off the concept of a central spine corridor and staff spaces where personnel from each office pod are encouraged to connect with one another. It is illuminated on the interior by a combination of skylights and large view windows into courtyards.

The entrance into each of the specialized pediatric providers is identified by gable roofed elements individualized by orientation, awning, & window configurations. Natural daylight is brought into the building including the exam rooms while the interior design incorporates soothing colors in playful designs; promoting an enjoyable atmosphere for the children and their families.

PRODUCT INNOVATION

Stonepeak Active is a natural-look, ceramic tile line that can significantly reduce the harmful aspects of atmospheric pollutants by purifying the air in the presence of artificial or natural light. It is antibacterial and has been tested by TCNA (Tile Council of North America)

STONEPEAK
high tech porcelain

PROJECT SPOTLIGHT: IU HEALTH BLOOMINGTON HOSPITAL, IP HOSPICE

Hospital staff and our design team are thrilled to open this 12-bed hospice house; a desperately needed facility to the South-Central Indiana region.

Craftsman-inspired features and an eclectic interior design scheme help to make people feel at home. Many 'green' features were implemented in all facets of the project design including native landscape plantings, geothermal mechanical systems, recycled/local building materials and green construction practices.

This is CDI's first project to be submitted to USGBC, seeking LEED certification.

A JOB WELL DONE

September 27th marked Cooler Design employee Audrey Millar's last day as president of ASID Indiana. Audrey carried out her administrative duties with zeal. Her leadership during the 2010-2011 term proved instrumental in developing both community service projects & greater involvement with the art & design community in Indiana.
